AIL Sound Walls installs reflective sound barrier around Atlanta Motorsports Park

Atlanta Motorsports Park (AMP) is a private country club for adrenaline-fuelled driving enthusiasts. AMP had removed some trees to create a retention pond, but those trees had been acting as a natural sound barrier. Neighboring residents and stable horses all said “nay” and a county judge ordered AMP to install a light-gauge metal sound barrier, similar to those used by the Georgia Department of Transportation (GDOT).

Project at a glance:

Name: Atlanta Motorsports Park Sound Barrier

Location: Dawsonville, GA

Owner: Atlanta Motorsports Park (AMP)

Contractor: Vertical Earth

Product: Tuf-Barrier (Reflective)

Sector: Commercial

Application: Racetrack Sound Barrier

Dimensions: 12' tall, 280' long

Installation Time: Two weeks

Our Tuf-Barrier system judged to be best for Atlanta raceway

AMP knew those metal walls were not very attractive and prone to rusting — not the image this high-end club was looking for. Researching it with their contractor, they discovered a more attractive, more effective and more economical alternative in AIL Sound Walls. They went back to the judge to get permission to use it instead.

After providing a preliminary design and budgetary pricing for the contractor to bid from, the AIL Sound Walls team also assisted the owner in providing aesthetic samples and durability/performance metrics to help the county judge and residents make an informed decision.

Our lightweight PVC Tuf-Barrier (Reflective) system was quickly fabricated, delivered and installed with limited track closures. A post-install site visit brought nothing but positive reviews from AMP officials, neighbors and the horses.
