## AIL Sound Walls mitigate unwanted noise from Foodland loading docks in Ontario

AIL Sound Walls recently designed and supplied a 35 m long sound barrier wall to protect residential neighbors from the noise emanating from a new Foodland store's loading area in Markdale, Ontario.

We were working with a first-time client, Maverick Developments, so a little extra effort was required to familiarize them with our system and its benefits. Once we connected them with the capable installation team at Compex Construction — already very familiar with AIL Sound Walls — things went ahead very smoothly.

### Project at a glance:

**Name:** Markdale Foodland

**Location:** Markdale, Ontario

**Owner:** Maverick Developments

**Acoustic Consultant:** J.E. Coulter Associates Limited

**Contractor:** Compex Construction

**Product:** Tuf-Barrier

**Sector:** Commercial

**Application:** Depot & Loading Dock Sound Walls

**Dimensions:** 4.3 m high, 35 m long

**Installation Time:** One week

The new Tuf-Barrier (Reflective) sound barrier wall was supplied in grey to co-ordinate with Foodland's exterior color scheme.

**Client very happy with the new sound barrier wall**

We worked very closely with Compex to coordinate a delivery time that aligned with their schedule and we supported them throughout the installation process.

Maverick Developments was very happy with the end result and we look forward to being their trusted source going forward.

**Sound relationships in noise mitigation**

We'd like to give a shout-out to J.E. Coulter Associates on this project. Our relationships with acoustic consultants have been a key part of our growth in the sound barrier wall market.
