AIL Sound Walls tuck in under canopy at Wag Hotels in Santa Clara, CA

Tails were wagging more vigorously than normal when word of the new sound barrier walls spread among the guests at Wag Hotels in Santa Clara, California. Perhaps they were extra excited that their barking would soon be less bothersome to the neighbors and they could become better friends.

Once installed, the lightweight PVC system from AIL Sound Walls tucked in under their outdoor canopy, mounted to the finished concrete slab and even matched their PVC fence dividers.

Project at a glance:

Project: Wag Hotels, Santa Clara

Location: Santa Clara, CA

Owner: Wag Hotels

Contractor: CMGi Construction

Product: Tuf-Barrier (Reflective)

Sector: Commercial

Application: Dog Kennel/Daycare

Dimensions: Three-sided wall 186' long x 8' tall

Installation Time: Three weeks

It also included a custom double gate made from the same panels as the wall. The lightweight, nimble and versatile AIL Sound Walls system is great for access gates, doors, utility ports and site variations.

Most economical solution meant more money for treats and toys

AIL Sound Walls representatives visited the site and collaborated with the contractors, Construction Management Group International (CMGi), on design options to come up with the most economical solution for the site.

The dogs were happy about that outcome, because it meant that their daycare would have more money for treats and toys.

In fact, their daycare owner even recommended AIL Sound Walls for the Wag Hotels down in Santa Monica.
