Gate Express Carwash chooses AIL Sound Walls to mitigate noise from two Florida locations

Gate Express Carwash operates 21 premium, free-standing express tunnel car washes throughout Northeast Florida. For sound mitigation solutions at their Jacksonville and St. Augustine locations, the Gate Express team selected a Tuf-Barrier (Reflective) system from AIL Sound Walls.

Project at a glance:

Name: Gate Express Carwash
Sound Barrier Wall

Location: Jacksonville, FL

Owner: Gate Petroleum Company

Product: Tuf-Barrier (Reflective)

Sector: Commercial

Application: Car Wash

Dimensions: Length 150', Height 10'

Our second project for Gate Express Carwash was in St. Augustine, but photos were unavailable at time of publication. We worked directly with the owner on both projects.

AIL Sound Walls are ideal for harsh car wash environments

Car wash environments are wet and demanding. AIL Sound Walls are made from durable PVC panels that withstand outdoor exposure while maintaining their acoustic properties for decades. This durability means lower maintenance and trouble-free service for many years.

Every car wash layout has its own challenges. Our flexible design options help us to tailor our sound barrier walls for each location. Heights and configurations can be adjusted to meet local ordinances or space restrictions. We also provide aesthetic options to complement the style of the site.
